

Web Framework which provides standardized development environment and templates : CruzFrame

CruzFrame is the Framework based on Java which offers standard development environment and templates for setting up web application.

Presentation Tier	Business Tier	Enterprise Information Tier
View Processing of screen for clients	Control Implementation of business logic	CMD Logic distinction & Interface task
Channel Client's request & result processing	Entity Business Data Management [Composition]	DAO Realization of all database & task logic

🔄 Main functions

Standardi-zation

- Integrated management of various channel
- J2EE standard service

Module

- Various common processing module

Parameter Driven

- Prompt task transformation
- Convenient maintenance

Structured task system

- Program simplification
- Increase development speed

User-oriented

- Integrated screen
- Single View for user

Stability

- DB Access Logic, Host link module

🔄 Main features

- 1 Implementation of stable system by the verified framework**
- 2 High productivity by the reuse of software module and prompt action to the change**
- 3 Maintain the high functions by core module upgrade**

🔄 Main institutions using CruzFrame

• Rail Ticket automatic dispenser system development of Korean National Railroad

• Banking system development of National Agricultural Cooperative

• SPC networks happy point system development
